New Space Data Access for Science and Application Development

Project title	
Application domain	
Executive summary	Please include the following details: ● Overall objectives ● What specific data is needed? ● Why these data are needed to achieve your goal ● What is the expected outcome? ● Project schedule and financing
Name of Investigator	
Institution	
Address	
Email Address	

Data Request

Planet offers satellite data that includes:
- RapidEye archive data available from 2009 to March 2020. This does not include global coverage.
- PlanetScope archive data available from 2016 until today. This includes daily global coverage.

*** To calculate your estimated total number of km² for an application, please multiply the size of your area of interest (AOI) by the number of coverage you need. Please make sure that the size of the AOI corresponds to the amount of km² ordered.

e.g. If your AOI is 100km² and you would like to download data of the same AOI 3 times, you should then order 300km².

*** Please attach your AOI (kml or geojson, WGS:84, EPSG: 4326) with the form.

*** Please also indicate the time period (TOI - Time of interest) for which you need the satellite data.

Product	Estimated amount of data	Time of Interest (TOI)
RapidEye	(Total Nr of km²)	
PlanetScope	(Total Nr of km²)
