SKYSAT IMAGERY
PRODUCT SPECIFICATION

## TABLE OF CONTENTS

COLLECTION TYPES

STANDARD IMAGE

Figure 1: A single "site," or a standard SkySat image deliverable. Image width varies with satellite and collection angle; 6.6 km represents the minimum width.

VIDEO

Full motion videos are collected between 30 and 120 seconds by a single camera from any of the active SkySats. Videos are collected using only the Panchromatic half of the camera, hence all videos are PAN only.

Videos are packaged and delivered with a video mpeg-4 file, plus all image frames with accompanying video metadata and a frame index file (reference Product Types below).

PRODUCT TYPES

SCENES

Basic

The SkySat Basic Scene product includes Analytic, Analytic DN, and Panchromatic imagery that is uncalibrated and in a raw digital number format. The Basic Scene Product is not corrected for any geometric distortions inherent in the imaging process.

Imagery data is accompanied by Rational Polynomial Coefficients (RPCs) to enable orthorectification by the user. This product is designed for users with advanced image processing capabilities and a desire to geometrically correct the product themselves.
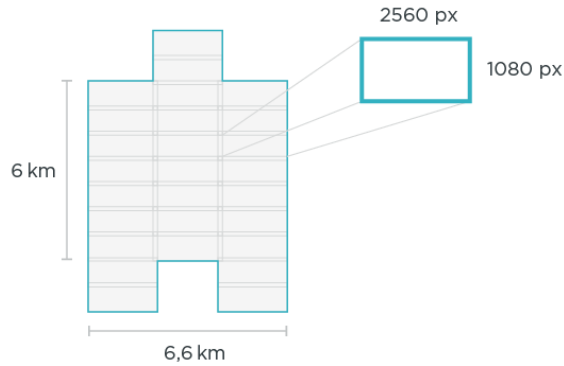

The SkySat Basic Scene Product has a sensor-based framing, and is not mapped to a cartographic projection.

- Analytic - unorthorectified, radiometrically corrected, multispectral BGRN
- Analytic DN - unorthorectified, multispectral BGRN
- Panchromatic DN - unorthorectified, panchromatic (PAN)

Table 1: SkySat Basic Scene Product Attributes

SKYSAT BASIC SCENE PRODUCT ATTRIBUTES

Product Attribute	Description
Product Components and Format	Image File – GeoTIFF format Metadata File – JSON format Rational Polynomial Coefficients – Text File UDM File – GeoTIFF format
Information Content	
Image Configurations	4-band Analytic DN Image (Blue, Green, Red, NIR)
	1-band Panchromatic DN Image (Pan)
Product Orientation	Spacecraft/Sensor Orientation
Product Framing	Scene based:

SkySat Satellites have three cameras per satellite, which capture overlapping strips. Each of these strips contain overlapping scenes.
One scene is approximately 2560px x 1080px.

Sensor Type	CMOS Frame Camera with Panchromatic and Multispectral halves
Spectral Bands	Blue: 450 - 515 nm Green: 515 - 595 nm Red: 605 - 695 nm NIR: 740 - 900 nm Pan: 450 - 900 nm

| Processing	Basic Scene
Product Bit Depth	16-bit Unsigned Integer Multispectral and Panchromatic Imagery
Radiometric Corrections	Cross-Sensor Non Uniformity Correction (1%) Conversion to absolute radiometric values based on calibration coefficients Calibration coefficients regularly monitored and updated with on-orbit calibration techniques
Geometric Corrections	Idealized sensor model and Rational Polynomial Coefficients (RPC) Bands are co-registered
Horizontal Datum	WGS84
Map Projection	N/A
Resampling Kernel	Resampling of Analytic Multispectral Data to > 1.0m GSD
Ground Sample Distance	[SkySat-1, SkySat-2] Panchromatic: 0.86m Multispectral: 1.0m
	[SkySat-3 - SkySat-13] Panchromatic: 0.72m Multispectral: 1.0m
Geometric Accuracy	<50m RMSE

Ortho

The SkySat Ortho Scene product includes Visual, Analytic DN, Analytic, Panchromatic, and Pansharpened Multispectral imagery. The Ortho Scene product is sensor- and geometrically-corrected, and is projected to a cartographic map projection. The geometric correction uses fine Digital Elevation Models (DEMs) with a post spacing of between 30 and 90 meters.

Ground Control Points (GCPs) are used in the creation of every image and the accuracy of the product will vary from region to region based on available GCPs.

- Visual - pansharpened, orthorectified, color corrected RGB
- Pansharpened Multispectral - pansharpened, orthorectified, color corrected BGRN
- Analytic - orthorectified, radiometrically corrected, multispectral BGRN
- Analytic DN - orthorectified, multispectral BGRN
- Panchromatic DN - orthorectified, panchromatic (PAN)

Table 2: SkySat Ortho Scene Product Attributes

SKYSAT ORTHO SCENE PRODUCT ATTRIBUTES

Processing

Radiometric Corrections	Cross-Sensor Non Uniformity Correction (1%) Conversion to absolute radiometric values based on calibration coefficients Calibration coefficients regularly monitored and updated with on-orbit calibration techniques
Geometric Corrections	Sensor-related effects are corrected using sensor telemetry and a sensor model. Orthorectification uses GCPs and fine DEMs (30 m to 90 m posting).
Horizontal Datum	WGS84
Map Projection	UTM
Resampling Kernel	Cubic Convolution
Geometric Accuracy	<10 m RMSE

Skysat Visual Ortho Scene

The SkySat Visual Ortho Scene product is orthorectified, pansharpened, and color-corrected (using a color curve) 3-band RGB Imagery.

Table 3: SkySat Visual Ortho Scene Attributes

SKYSAT VISUAL ORTHO SCENE ATTRIBUTES

Product Attribute	Description
Visual Bands	Visual: 3-band Pansharpened Image (PS Red, PS Green, PS Blue)
Ground Sample Distance	Multispectral: 1.0 m
	Panchromatic: 0.72 m
Processing	
Pixel Size (Orthorectified)	0.8 m
Bit Depth	8-bit Unsigned Integer
Geometric Corrections	Sensor-related effects are corrected using sensor telemetry and a sensor model. Orthorectification uses GCPs and fine DEMs (30m to 90m posting).
Positional Accuracy	Less than 10 m RMSE
Color Enhancements	Enhanced for visual use

Skysat Pansharpened Multispectral Ortho Scene

The SkySat Pansharpened Multispectral Scene product is orthorectified, pansharpened 4-band BGRN Imagery.

Table 4: SkySat Pansharpened Multispectral Scene Attributes

SKYSAT PANSHARPENED MULTISPECTRAL SCENE ATTRIBUTES

Product Attribute	Description
Analytic Bands	Multispectral: 4-band Pansharpened Image (PS Blue, PS Green, PS Red, PS NIR)
Ground Sample Distance	Multispectral: 1.0 m
	Panchromatic: 0.72 m
Processing	
Pixel Size (Orthorectified)	0.8 m

Bit Depth	16-bit Unsigned Integer
Geometric Corrections	Sensor-related effects are corrected using sensor telemetry and a sensor model. Orthorectification uses GCPs and fine DEMs (30m to 90m posting).
Positional Accuracy	Less than 10 m RMSE

Skysat Analytic Ortho Scene - Top Of Atmosphere Radiance

Analytic products are calibrated multispectral imagery products that have been processed to allow analysts to derive information products for data science and analytics. The imagery has radiometric corrections applied to correct for any sensor artifacts and transformation to top-of-atmosphere radiance.

Table 5: SkySat Analytic Ortho Scene Attributes

SKYSAT ANALYTIC ORTHO SCENE ATTRIBUTES

Product Attribute	Description
Analytic Bands	4-band Analytic Image (B, G, R, N)
Pixel Size	1.0 m
Image Bit Depth	16-bit Unsigned Integer
Projection	UTM WGS84
Resampling Kernel	Cubic Convolution
Radiometric Corrections	- Absolute Radiance derived using vicarious calibration methods - Product is radiometrically calibrated to radiance units [W/(µm * m^2 * str)], and scaled by 100 to reduce quantization errors - Calibration regularly monitored and updated with on-orbit calibration techniques.
Radiometric Accuracy	+/- 5% Relative accuracy at < 10 degrees off-nadir angle

Skysat Analytic Dn Ortho Scene

The SkySat Analytic DN Ortho Scene product is orthorectified, multispectral data from the SkySat constellation. The Analytic DN product is an uncalibrated, digital number imagery product. This product is designed for a wide variety of applications that require imagery with an accurate geolocation and cartographic projection. The product has been processed to remove distortions caused by terrain. It eliminates the perspective effect on the ground (not on buildings), restoring the geometry of a vertical shot. In addition to orthorectification, the imagery has radiometric corrections applied to correct for any sensor artifacts. The initial availability does not include transformation to at-sensor radiance.

Table 6: SkySat Analytic DN Ortho Scene Attributes

SKYSAT ANALYTIC DN ORTHO SCENE ATTRIBUTES

Product Attribute	Description
Analytic Bands	4-band Analytic DN Image (B, G, R, N)
Ground Sample Distance	1.0 m
Processing	
Pixel Size (Orthorectified)	1.0 m
Bit Depth	16-bit Unsigned Integer
Geometric Corrections	Sensor-related effects are corrected using sensor telemetry and a sensor model. Orthorectification uses GCPs and fine DEMs (30m to 90m posting).
Positional Accuracy	Less than 10 m RMSE
Radiometric Calibration Accuracy	Initial availability: No correction applied; pixel values are digital numbers

Skysat Panchromatic Dn Ortho Scene

The SkySat Panchromatic Ortho Scene product is orthorectified, panchromatic data from the SkySat constellation. The Panchromatic DN product is an uncalibrated, digital number imagery product. The Panchromatic product has a finer GSD than the Analytic Product due to NOAA license restrictions, and is useful for visual interpretation as well as pan-sharpening of coarser resolution Multispectral data. The initial availability does not include transformation to at-sensor radiance.

Table 7: SkySat Panchromatic Ortho Scene Attributes

SKYSAT PANCHROMATIC ORTHO SCENE ATTRIBUTES

Product Attribute	Description
Analytic Bands	1-band Panchromatic Image
Ground Sample Distance	0.72 m
Processing	
Pixel Size (Orthorectified)	0.8 m
Bit Depth	16-bit Unsigned Integer
Geometric Corrections	Sensor-related effects are corrected using sensor telemetry and a sensor model. Orthorectification uses GCPs and fine DEMs (30m to 90m posting).
Positional Accuracy	Less than 10 m RMSE
Radiometric Calibration Accuracy	Initial availability: No correction applied: pixel values are digital numbers

Scene Metadata

Basic Scene GeoJSON metadata

Table 8: Skysat Basic Scene Geojson Metadata Schema

SKYSAT BASIC SCENE GEOJSON METADATA SCHEMA

Parameter	Description	Type
acquired	The RFC 3339 acquisition time of the image.	string
camera_id	The specific detector used to capture the scene.	String (e.g. "d1", "d2")
cloud_cover	The estimated percentage of the scene covered by clouds.	number (0-100)
ground_control	If the image meets the positional accuracy specifications this value will be true. If the image has uncertain positional accuracy, this value will be false.	boolean
gsd	The ground sampling distance of the image acquisition.	number
item_type	The name of the item type that models shared imagery data schema.	string (e.g. "PSScene3Band", "SkySatScene")
provider	Name of the imagery provider.	string ("planetscope","rapideye", "skysat")
published	The RFC 3339 timestamp at which this item was added to the API.	string
quality_category	Metric for image quality. To qualify for "standard" image quality an image must meet a variety of quality standards, for example: PAN motion blur less than 1.15 pixels, compression bits per pixel less than 3. If the image does not meet these criteria it is considered "test" quality.	string ("standard", "test")
satellite_azimuth	Angle from true north to the satellite vector at the time of imaging, projected on the horizontal plane in degrees.	number (0 - 360)
satellite_id	Globally unique identifier of the satellite that acquired the underlying imagery.	string
strip_id	Globally unique identifier of the image strip this scene was collected against	string

sun_azimuth	Angle from true north to the sun vector projected on the horizontal plane in degrees.	number (0 - 360)
sun_elevation	Elevation angle of the sun in degrees.	number (0 - 90)
updated	The RFC 3339 timestamp at which this item was updated in the API.	string
view_angle	Spacecraft across-track off-nadir viewing angle used for imaging, in degrees with + being east and - being west.	number (-90 - +90)

Basic Scene RPC metadata

Table 9: Skysat Basic Scene Text file Metadata Schema

Parameter	Description	Sample
LINE_OFF	Row offset of center point	534.896219421794
SAMP_OFF	Column offset of center point	1267.3960612691
LAT_OFF	Latitude coordinate of center point	-18.1132
LONG_OFF	Longitude coordinate of center point	178.4441
HEIGHT_OFF	Altitude of center point	123
LINE_SCALE	Scaling factor for row coordinate	534.896219421794
SAMP_SCALE	Scaling factor for column coordinate	1267.39606126914
LAT_SCALE	Scaling factor for latitude coordinates	-0.0264
LONG_SCALE	Scaling factor for longitude coordinates	0.0331
HEIGHT_SCALE	Scaling factor for altitude coordinates	77
LINE_NUM_COEFF_	Numerator coefficient in row RPC equation (1-20)	4.27902854674
LINE_DEN_COEFF_	Denominator Coefficient in row RPC equation(1-20)	0.00174493132019
SAMP_NUM_COEFF_	Numerator coefficient in column RPC equation(1-20)	0.0110620153979
SAMP_DEN_COEFF_	Denominator coefficient in column RPC equation (1-20)	0.00174477677906

Analytic Ortho Scene Specifications

To convert the pixel values of the Analytic products to radiance, it is necessary to multiply the DN value by the radiometric scale factor, as follows:

RAD(i) = DN(i) * radiometric_scale_factor(i), where radiometric_scale_factor(i) = 0.01

The resulting value is the Top of Atmosphere Radiance of that pixel in watts per steradian per square meter (W/m²*sr*µm).

To convert the pixel values of the Analytic products to Top of Atmosphere Reflectance, it is necessary to multiply the DN value by the reflectance coefficient found in the GeoTiff header. This makes the complete conversion from DN to Top of Atmosphere Reflectance to be as follows:

REF(i) = DN(i) * reflectance_coefficient(i)

Alternatively, the customer may perform the TOA Reflectance conversion on their own using the following equation, with the ESUN values given below in Table 3.

$$TOAR = \frac{(\pi \times Radiance \times d^2)}{ESUN \times \cos(90 - sun\ elevation)}$$

d = Earth to sun distance in astronomical units

Table 11: Skysat Analytic Ortho Scene ESUN values, resampled from Thuillier irradiance spectra

SkySat Analytic Scene GeoTIFF Properties

Table 12: Properties included in the GeoTIFF Header, under 'TIFFTAG_IMAGEDESCRIPTION'

| Field	Value	Sample
radiometric_scale_factor	Provides the parameter to convert the scaled radiance pixel value to radiance. Multiplying the scaled radiance pixel values by the scale factor, derives the Top of Atmosphere Radiance product. This value is a constant, set to 0.01	0.01
reflectance_coefficients	The value is a multiplicative, when multiplied with the DN values, provides the Top of Atmosphere Reflectance values, in watts per steradian per square meter (W/m²*sr*µm)	[0.0019093447035360626, 0.0021074819723268657, 0.002420630889355243, 0.003471901841411239]
satellite_azimuth	Angle from true north to the satellite vector at the time of imaging, projected on the horizontal plane in degrees.	103.22169693
satellite_elevation	Angle between the satellite pointing direction and the local horizontal plane in degrees.	61.32334041
sun_azimuth	Angle from true north to the sun vector projected on the horizontal plane in degrees.	136.7200917
sun_elevation	Elevation angle of the sun in degrees.	56.98039498

COLLECTS

Ortho

The Ortho Collect product is created by composing SkySat Ortho Scenes along an imaging strip into segments typically unifying ~60 SkySat Ortho Scenes. The product may contain artifacts resulting from the composing process, particular offsets in areas of stitched source scenes. In a next version artifacts caused by scene misalignment will be hidden by cutlines. This is particularly important for the appearance of objects in built-up areas and their accurate extraction.

- Visual - pansharpened, orthorectified, color corrected RGB
- Pansharpened Multispectral - pansharpened, orthorectified, color corrected BGRN
- Analytic DN - orthorectified, multispectral BGRN
- Panchromatic DN - orthorectified, panchromatic (PAN)

*Asset attributes match those of the Scene counterparts listed above

Table 13: Skysat Ortho Collect Attributes

SKYSAT ORTHO COLLECT ATTRIBUTES

Attribute	Description
Product Framing	Strip Based SkySat Satellites have three cameras per satellite, which capture overlapping strips. Each of these strips contain overlapping scenes. One Collect product composes up to 60 scenes (up to 20 per camera) and is approximately 20km x 6.6km.
Assets	Visual: 3-band Pansharpened Image (8-bit Unsigned Integer) Multispectral: 4-band Pansharpened Image (16-bit Unsigned Integer) 4-band Analytic DN Image (B, G, R, N) (16-bit Unsigned Integer) 1-band Panchromatic Image (16-bit Unsigned Integer)
Projection	UTM WGS84
Geometric Corrections	Sensor-related effects are corrected using sensor telemetry and a sensor model. Orthorectification uses GCPs and fine DEMs (30m to 90m posting).

Positional Accuracy	Less than 10 m RMSE
Radiometric Corrections	No correction applied; pixel values are digital numbers

Parameter	Description	Type
acquired	The RFC 3339 acquisition time of the image.	string
camera_id	The specific detector used to capture the scene.	String (e.g. "d1", "d2")
cloud_cover	The estimated percentage of the scene covered by clouds.	number (0-100)
ground_control	If the image meets the positional accuracy specifications this value will be true. If the image has uncertain positional accuracy, this value will be false.	boolean
gsd	The ground sampling distance of the image acquisition.	number
item_type	The name of the item type that models shared imagery data schema.	string (e.g. "PSScene3Band", "SkySatCollect")
provider	Name of the imagery provider.	string ("planetscope","rapideye", "skysat")
published	The RFC 3339 timestamp at which this item was added to the API.	string
quality_category	Metric for image quality. To qualify for "standard" image quality an image must meet a variety of quality standards, for example: PAN motion blur less than 1.15 pixels, compression bits per pixel less than 3. If the image does not meet these criteria it is considered "test" quality.	string ("standard", "test")
satellite_azimuth	Angle from true north to the satellite vector at the time of imaging, projected on the horizontal plane in degrees.	number (0 - 360)
satellite_id	Globally unique identifier of the satellite that acquired the underlying imagery.	string

strip_id	Globally unique identifier of the image strip this scene was collected against	string
sun_azimuth	Angle from true north to the sun vector projected on the horizontal plane in degrees.	number (0 - 360)
sun_elevation	Elevation angle of the sun in degrees.	number (0 - 90)
updated	The RFC 3339 timestamp at which this item was updated in the API.	string
view_angle	Spacecraft across-track off-nadir viewing angle used for imaging, in degrees with + being east and - being west.	number (-90 - +90)

BASEMAP MOSAIC TILES

All basemaps can be viewed at full resolution within the Planet graphical user interface (up to Zoom Level 18 in the Web Mercator Projection), giving a resolution of 0.597 m at the Equator. The projection used in Planet basemaps has been selected to match what is typically used in web mapping applications. The resolution improves at higher and lower latitudes. The Alpha Mask indicates areas of the quad where there is no imagery data available.

Table 15: Individual Quad Specifications

INDIVIDUAL QUAD SPECIFICATIONS

Attribute	Description
Sensors	SkySat
Pixel Size (resolution)	.597m
Image Bit Depth	8 bits per pixel
Bands	Red, Green, Blue, Alpha
Projection	WGS84 Web Mercator (EPSG:3857)
Size	4096 x 4096 pixels
Processing	Pansharpened. Geometrically aligned. Seam lines are minimized with tonal balancing. Cutlines to minimize visual breaks
